## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 1-6, 9-10, and 14 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over JP 2001-114519.**

JP '519 teaches a method of making titania by dissolving a titanium alkoxide in a solvent, to obtain a titanium alkoxide solution, the solution is mixed with water and a aliphatic alcohol, hydrolysis is then performed on the mixed solution, a polymerization is carried out and is characterized by obtaining a polymer solution and calcining this

polymer solution under the presence of a fatty-acid (Claim 6 and 7). The titania produced by this method has a 10 nm crystallite diameter (Abstract) and a specific surface area greater than 180 m<sup>2</sup>/g (Claim 2).

**Claims 1-6, 8, and 11-14 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Chopin US 6740312.**

Chopin teaches a method of making titania by subjecting a titanium salt solution to hydrolysis by heating under the presence of a carboxyl group or a carbonyl group (Column 4 Line 64 – Column 5 Line 30), and then further carrying out heat treatment with an acid (Column 7 Lines 1-7). Chopin teaches that the solution is boiled and that it maybe acidic. The titania particles made this process have a particle size of at most 100 nm and a specific surface area of at least 200 m<sup>2</sup>/g (Claim 16).
